

DMX PCB's Custom Install Example

This example is a THREE Function Chassis: MERGER, SPLITTER, and ANALYZER. Inputs inserted in the MERGER inputs A and B will combine, the merged output loops through the Analyzers' A input and then to the DSI-4 (or DS4) splitter board to generate 4 outputs. An additional front panel XLR is connected to the Analyzers' B input to easily analyze and test any device output.

Digikey 19" Rack
377-1208-ND

Note – The DSI-4 and DMG PCB's do NOT have a power connector attached – SPECIAL ORDER

This example is a 2 rack unit chassis. A 1 rack unit chassis can be used – replacing the DLA Board with a SPECIAL ORDER DLA-1RU Assembly

The XLR's can be either 3 or 5 pin, male or female
