

DPM-RL PCB Assembly Options

ELM Video Technology, Inc.

The DPM-RL/Coil PCB is a dual channel relay board, providing two 5A fused dry contact closure connections. The DPM-RL/SSR PCB is a dual channel SSR (Solid State Relay) relay board, providing two 2A electronically switched connections. Both boards are designed with mosfet inputs and are daisy chainable for multiple pcb's to be attached. Any combination of the Coil or SSR boards can be attached.

Please note the DPM4 is a (4) channel DMX512 control board and all daisy chained PCB's connected to a respective DPM4 will operate from these (4) channels. To add additional DMX channels an additional DPM4 is needed.

**voltage driven input, not current driven*
